# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

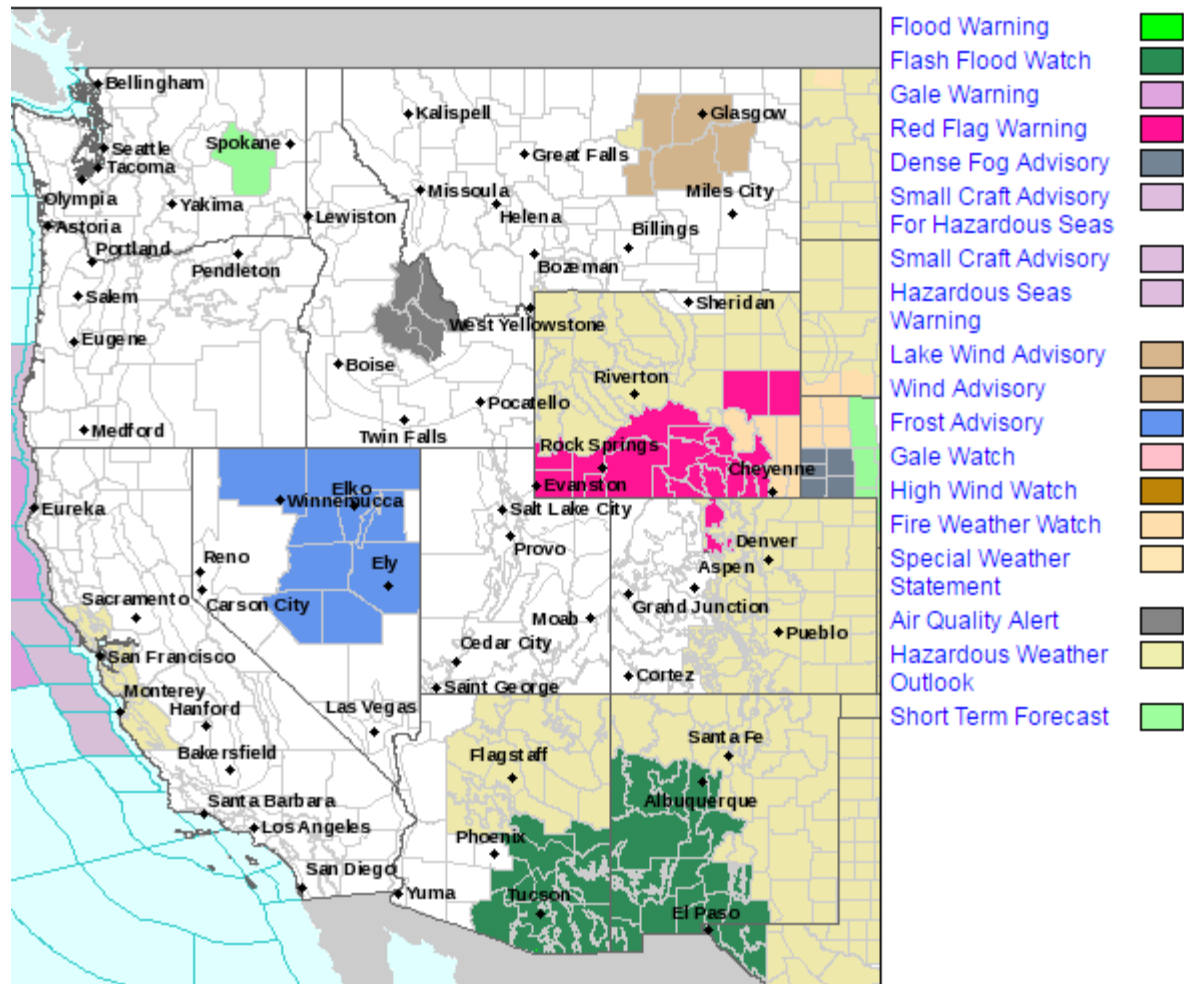

The region will remain under a dry northwest flow, sandwiched between strong high pressure over the eastern Pacific and a low pressure trough over the Great Basin and Rocky Mountains through the end of the week. There will be a few scattered mid and high clouds toward the Oregon state line on 09/07/16, but showers or thunderstorms are unlikely. A warming trend will bring afternoon temperatures 5-10 degrees above normal 09/08/16 through the weekend. During nights and mornings through 09/11/16 dry north to northeast winds will gust to 20-25 mph and locally higher in the Sacramento Valley/foothills, and on the mid and upper slopes in far northwest California. Poor overnight relative humidity (RH) recovery will become more widespread each night. RH recovery will be to 20-40% in affected areas. Afternoon humidity in many inland areas will be 8-15%. The marine layer will gradually become more shallow, but still move into coastal basins and drainages from Mendocino or Sonoma County south each evening. Farther north, the overnight northeast winds will keep the marine layer closer to the coast. On 09/12/16 a dry front will move from north to south across the region. Following the front, dry north to northeast winds will gust to 25-30 mph around the clock for a few days from the Cascade-Sierra crest to the coast. Afternoon humidity will be 5-15%, and widespread poor overnight RH recovery can be expected. This pattern has the potential to be a High Risk event.

## **SOUTHERN CALIFORNIA**

High temperatures will climb 3-5 degrees 09/06/16 and 09/07/16 with highs reaching the 70s in the mountains above 6,000 feet to the lower to mid 90s in the valleys by the middle of the week. Winds are expected to remain light the next two days. Minimum relative humidity (RH) will fall into the 8-12% range across many inland areas for 3-5 hours each afternoon below 5,000 feet. But clear skies and light winds should allow for good recovery each night. A dissipating tropical system will bring widespread thunderstorms to the far eastern deserts 09/07/16. Nearly all of the moisture associated with this system will remain over Arizona, but some wetting rains will be possible along the Colorado River 09/07/16 and 09/07/16 night. A weak trough over the Great Basin will bring a minor cooling trend back to the region 09/08/16 and 09/09/16. A deeper trough may bring below normal temperatures and a slight increase in winds 09/11/16 and 09/12/16.
